

The Universities of Salford and Southampton and digistories are gathering stories told by railway engineers at

The National Railway Museum, York

Engineers! **You have a story to tell**

DIGITAL STORIES are self made in facilitated workshops using your personal photographs, a short script and computer software. They are short pieces of narrated video. The form was successfully pioneered by the BBC and is now popular in workshops throughout the country.

You bring the pictures and the story. We supply all the equipment and skills to guide you through the process. Your workshop will be led by Barrie Stephenson, former Executive Producer of BBC Telling Lives and member of the Friends of the National Railway Museum

LEARN NEW SKILLS Storytelling, script writing, sound recording, digital editing, and media awareness. Discover new insights as you tell your stories and listen to others telling theirs.

These workshops are funded by a grant from the Royal Society of Engineering to raise public awareness and to promote careers in engineering.

The finished stories will feature in a series of science and engineering fairs in the summer of 2009 and on selected internet sites.

WORKSHOP DATES

Three Wednesdays

February 4th / 11th, March 4th

Storytellers need to attend all 3 days.

There is *No Charge* for participating, but booking is essential
